Who am i/What is this

I'm a solo group and
I'm using this project
as an opportunity to
develop a
concept/portfolio
piece and bones for a
personal game
concept.

Plot Summary

Humanity has been cut off from heaven, the cycle of reincarnations and souls are trapped in the crumbling mortal realm as the once held back wild magic warps the world into an unrecognizable husk. Humanity last home is to try and wrestle back the control of heaven from the self installed despot “The Don.”

TLDR:

It's a zany wacky world with no rules, anything can happen and everyone is going nuts.

Core Idea: Roguelike-Boss Rush in Post-Rapture world in Pre-Prohibition America

The core loop of the game is to ascend the layers of the broken earth to reach heaven, each attempt will have the player maneuver through different towns fighting different bosses. Each run has different routes and encounters and its designed to be fast paced and playable in bursts

Aesthetically the main cast and important bosses will have the aesthetic of Mobsters and Gangsters, they will have sub themes based on the layer you find them. The demo is for the boss Road Rager which acts as a sub-boss between layers.

Jump

How to play

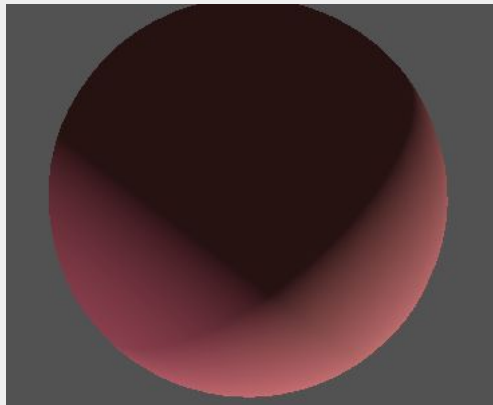

Shoot the Boss 100 times to win, take damage 5 times and lose.

Hit back a dropped molotov cocktail for 5 more damage.

Attacks:

- Molotov + Crossfire
- Forward Shockwave
- Fumbled Throw

Shaders from previous demo

1

Lambert+Specular+Ambiance

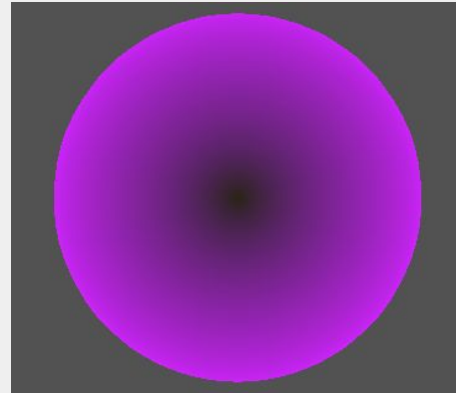

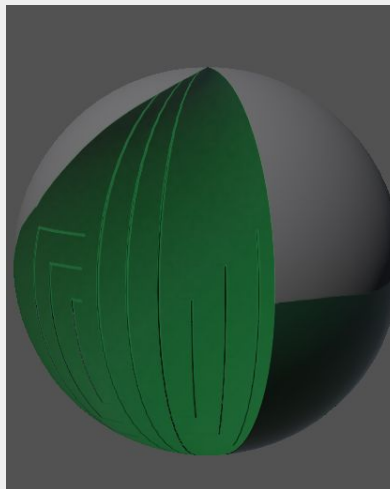

Lambert + Ambiant + Specular
Reflection

(ShaderScript)

2

Standard Material for Truck

Texture Sampling with simple
default Material.
(ShaderScript)

3

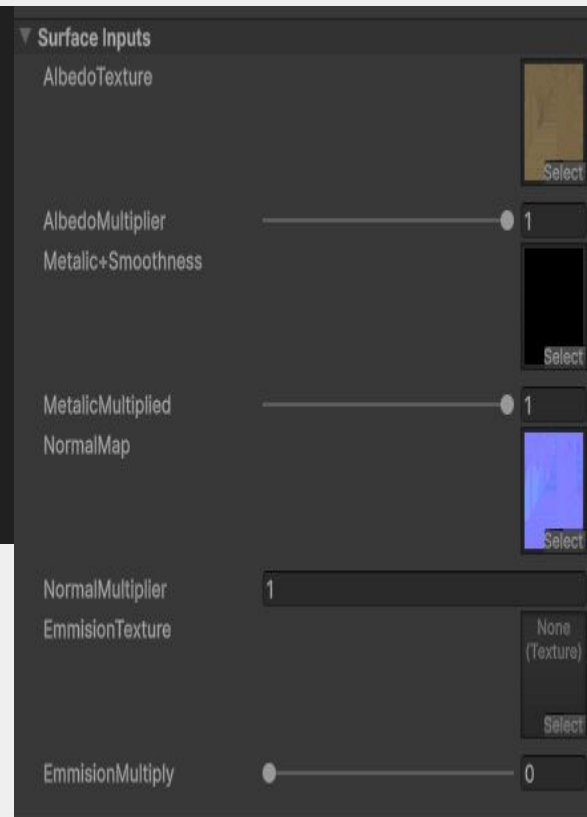

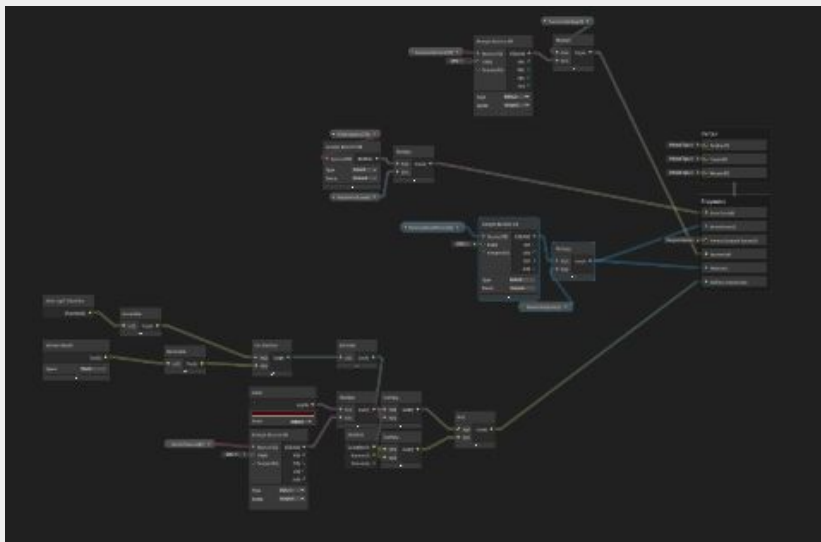

Product feature

Simple Rim Lighting effect to
help The boss stand out from
the rest of the scene
(ShaderScript)

New and Improved

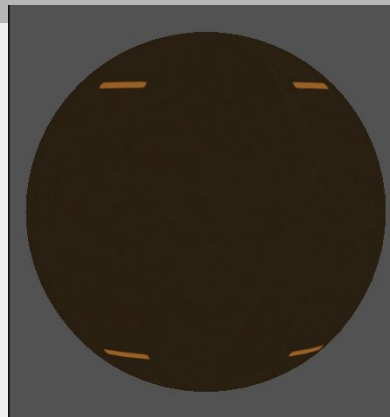

New Model and texture for main character! Instead of using the built in shader graph i created my own that manages the different exported textures for albedo, metallic/smooth, normals and emission along with a manual ambient occlusion. Shadergraph (also used for the truck.)

More Complex Shaders

a 2 texture material that takes the first one at a base with texturing and panning, then the second one is an opaque material that is filtered through a noise filter which can be scaled through the noise scale, intensity and speed along with the base textures same tiling and panning.

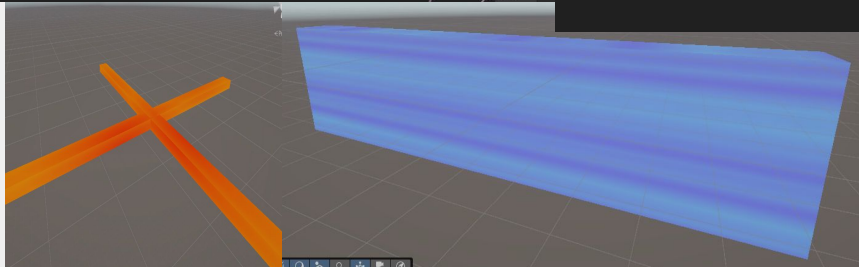

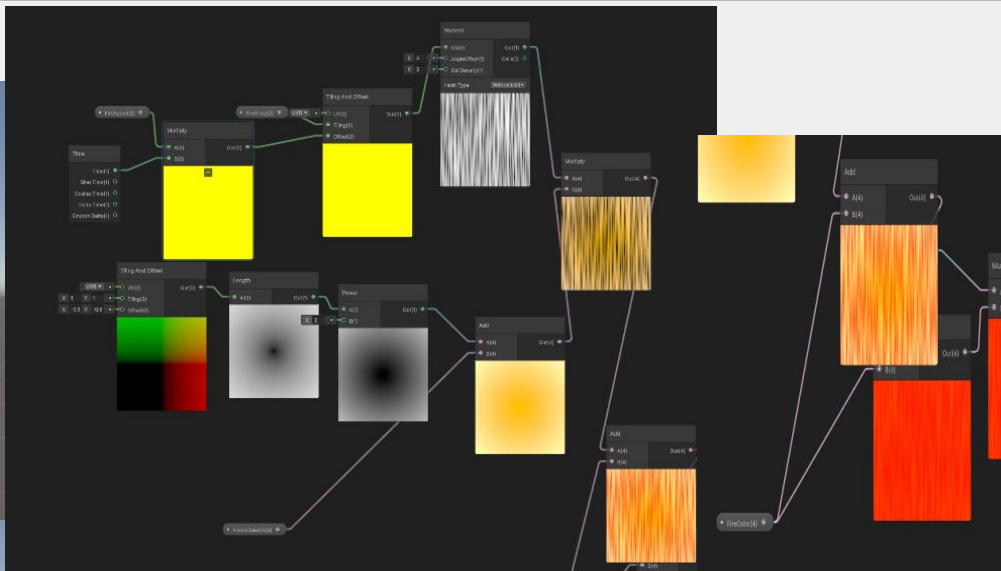

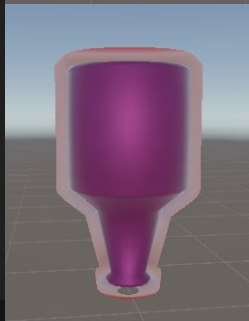

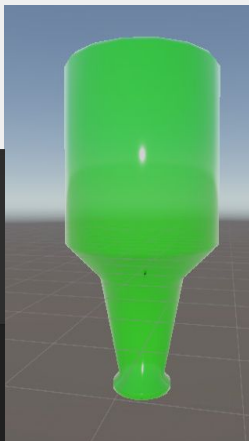

Same as the first one, but without the noise texturing and instead feeds the whole thing through an ambient lighting filter after the 2 layers have been rendered on top of eachother.

New and Improved

- Fixed Health bar image opacity scaling
- Added Skybox
- Switched Lighting to be baked onto GPU
- Added Reflection Probe
- Changed Default Light and shadow color
- Shaded Smooth on MC's Clothing
- Smarter boss behavior + new attacks
- Bottles Spin now!

New and Improved
